Part of the **BOAST** System -
pool water care made easy

Pool preparation before using a Multifunctional Floating Dispenser

PREPARATION TIP	REASON WHY	Recommended product/s
Brush and vacuum pool walls and floor	<ul style="list-style-type: none"> - This will bring the surface clinging algae into suspension and allow the sanitiser and algaecide to work - Nutrients that algae can feed on will be more effectively removed 	
Maintain correct pH levels	<ul style="list-style-type: none"> - This will ensure the sanitiser is working more efficiently. A high pH level will greatly reduce how efficiently chlorine works - Algae spores multiply more rapidly at a high pH 	 <p>Blue Horizons pH Minus</p>
Shock dose your pool	<ul style="list-style-type: none"> - Shock dose your pool to 5 – 10mg/l (ppm) of free chlorine prior to the addition of the Holiday Pill - This will help to ensure the sanitiser level is maintained over the holiday period 	 <p>Blue Horizons Rapid Shock</p>
Top-up your Blue Horizons algaecide level if required	<ul style="list-style-type: none"> - Adding a top-up dose of algaecide will help to keep the pool clear and algae free over the holiday period 	 <p>Blue Horizons Long Life Algaecides</p>
